

Zeta Rod® systems

APPLICATION SUMMARY

Pools, Spas & Water Features

Zeta Rod systems **green technology** delivers results for pool & spa water treatment programs.

The Zeta Rod is a powerful **electro-dispersion technology** that controls biological and scale forming particles. When applied to the management of pool and spa chemistry, the Zeta Rod delivers benefits to reduce costs and provide superior performance:

Scale prevention allows waterline surfaces to be easily maintained without progressive damage from abrasives or acids.

Pool chemistry is more stable resulting in consistent chemistry balance with reduced effort.

“Luxurious water” as described by swimmers. Enhanced feel of water is smoother and less irritating.

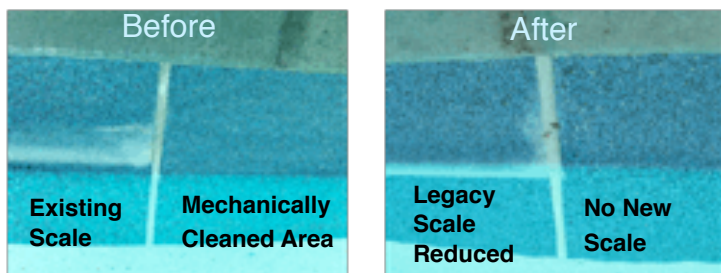

Increased efficiency and protection of pool equipment through elimination of biofouling and scale control.

Zeta Rod systems are modular in nature, providing results in **residential, commercial and industrial** systems of all sizes.

Made in the USA, this green technology requires virtually **no maintenance**.

Below: WATERLINE SCALE PREVENTION: Independent observations confirm no new scale formation and significant reduction of existing scale on a research test pool in Phoenix Arizona. **LEFT PHOTO:** A section of tiles on scaled pool tiles was mechanically cleaned at the beginning of the study period. **RIGHT PHOTO:** After 6 months, no new scale had formed and existing scale that had not previously been mechanically cleaned was significantly reduced.

MUNICIPAL SWIMMING POOL: Zeta Rod installed in 6” PVC piping has been continuously treating 220,000 gallons of recirculating municipal pool water in the Arizona desert since 2002.
